Cyanocobalamin, for cobalamin deficiency, 789, 3612
Cyanosis, **278**
approach to the patient, 279
central, 278–279, 278t, 1859
in coma, 189
in congenital heart disease, 451
degree of, 278
differential diagnosis of, 278–279
etiology of, 278t
in hemoglobinopathy, 780
pathophysiology of, 278
peripheral (acrocyanosis), 278t, 279, 1859
CYB5A gene mutations, 3099t
CYB5R3 deficiency, 780
CYBC1, 460
Cyclic adenosine 5'-monophosphate (cyclic AMP), 135, 135f, 974, 3449, 3689, 3689f
Cyclic guanosine monophosphate (cGMP), 1981, 2194, 3155, 3156f
Cyclic neutropenia, 136, 261, 457
Cyclic vomiting syndrome, 298, 300
Cyclin B1, 2790t
Cyclin-dependent kinase(s), 573
Cyclin-dependent kinase inhibitors. *See* CDK inhibitors
Cyclobenzaprine, 3713t
for fibromyalgia, 2965, 2966t
for neck pain, 132
for spasticity, 3588
Cyclobutane dimers, 429–430
Cyclomodulins, 973
Cyclooxygenase (COX), 136, 2517, 2518f
Cyclooxygenase (COX) inhibitors, 96–97, 136, 943f. *See also* Aspirin
Cyclooxygenase 2 (COX-2) inhibitors. *See also* Nonsteroidal anti-inflammatory drugs (NSAIDs)
adverse effects of, 97–98, 359, 2517
for colorectal cancer prevention, 513
for fever, 136
in NSAID-induced ulceration prevention, 2530
for osteoarthritis, 2955, 2955t
for pain, 96–98
in peptic ulcer disease, 317
Cyclooxygenase 3 (COX-3), 136
Cyclopentolate hydrochloride, 222
Cyclophosphamide
actions of, 563
adverse effects of, 562t, 563, 2873, 2916t
bladder cancer, 2895
cardiovascular, 754, 2017
cutaneous, 400, 420
cystitis, 563, 597, 757, 916
hepatotoxicity, 2667
immune system dysfunction, 755
infertility, 756, 2418, 3115
leukopenia, 2899
long-term, 753t
major, 2896t
male infertility, 3115
nausea and vomiting, 575
pulmonary, 754
for AL amyloidosis, 898
for autoimmune hemolytic anemia, 802
for Behçet syndrome, 2909
for breast cancer, 637, 638
for Burkitt's lymphoma, 862
for cardiac amyloidosis, 2027
for CLL, 855
for DLCBL, 863
for EGPA, 2233, 2900
for Ewing's sarcoma, 730
for follicular lymphoma, 864
for gastric lymphoma, 650
for gestational trophoblastic disease, 715
for granulomatosis with polyangiitis, 2899
for inflammatory myopathies, 2916t
interactions and issues, 562t
for lupus nephritis, 2418, 2834–2835
for lymphoplasmacytic lymphoma, 865
for metastatic breast cancer, 641

for metastatic pheochromocytoma, 3077
for mucous membrane pemphigoid, 413
for multiple myeloma, 890t
for myasthenia gravis, 3631
for pemphigus vulgaris, 410
for photoallergy, 434
for systemic sclerosis, 2873, 2874
for thymic tumors, 632
for vasculitis, 2895
for Waldenström's macroglobulinemia, 894
Cyclops spp., 1813, 1825, 1839
Cyclosarin (GF), S5
Cycloserine, 1394t, 1399, 1425, 2609
Cyclospora cayetanensis/cyclosporiasis, 305, 1805t, **1806,** S12
Cyclosporin A, 466, 469
Cyclosporine
actions of, 2408, 2408t, 2565, 2721
adverse effects of, 387t, 813, 2408t, 2565, 2721, 2916t
carcinogenicity, 512t
dyslipidemia, 3247
gingival overgrowth, 261
gout, 2940t
hirsutism, 3138
hyperkalemia, 359
hypertrichosis, 421
hypoperfusion syndrome, 2350, 2350f, 2350t
microangiopathic hemolytic anemia, 925
myopathy, 2940t
nephrotoxicity, 2408, 2443, 2721
osteoporosis, 3296
seizures, 2565, 3414t
skin cancer, 433
thrombotic microangiopathy, 2445
for aplastic anemia, 813
for atopic dermatitis, 383, 393t
for Behçet syndrome, 2909
contraindications to, 387
for DIHS, 424
drug interactions of, 485t, 489t, 2408, 3927
azithromycin, 1744t
azoles, 1742t
chloroquine, 1741t
for epidermolysis bullosa acquisita, 413
for GVHD prophylaxis, 908
for IBD, 2565
for IC/BPS, 335–336
for immunosuppression
after cardiac transplantation, 2029t
after kidney transplantation, 2408, 2408t
after liver transplantation, 2721
for inflammatory myopathies, 2916t
for MDS, 817–818
metabolism of, 485t
for myasthenia gravis, 3631
P-glycoprotein and, 485t
for photoallergy, 434
for psoriasis, 387, 387t, 393t
for SJS/TEN, 425
for urticaria, 2809
Cyclothymic disorder, 3668
CYP1A1, 615
CYP2B6, 1582t, 1585
CYP2C9
in drug metabolism pathways, 485t
drug responses and, 491, 493, E72t
frequency of variants in, E72t
warfarin dose requirements and, 951, 951t
CYP2C19
in drug metabolism pathways, 485t
drug responses and, 492–493, 939, 944, E72t
frequency of variants in, E72t
CYP2D6
in autoimmune hepatitis, 2790t
in drug metabolism pathways, 492f
drug responses and, 485t, 492, E72t
frequency of variants in, E72t
CYP3A, 485t
CYP3A4, 492, 939, 1167, 2688, 3271
CYP3A5, 492, E72t
CYP7A1 gene mutations, 2728
CYP11A1, 3052
CYP11A1 gene mutations, 3098, 3099t
CYP11B1 gene mutations, 355, 3101, 3101t, 3784
CYP11B2 gene mutations, 355, 3784
CYP17 (17α-hydroxylase), 2790t
CYP17 (17α-hydroxylase) gene mutations, 3052, 3098, 3099t
CYP19 gene mutations, 3101, 3101t, 3115
CYP21 (21-Hydroxylase), 2790t
CYP21A1P pseudogene, 3785
CYP21A2 (21-hydroxylase gene) mutations, 3071, 3071t, 3101, 3101t, 3785
CYPIIa (cholesterol side-chain cleavage enzyme), 2790t
Cyproheptadine
for antidepressant side effect management of, 3660t
for Cushing's disease, 3012
for ergot alkaloid overdosage/poisoning, 3710t
for migraine prevention, 3469
for serotonin syndrome, 3715t
for urticaria, 2809
Cyproterone acetate, 3141
CysLT (cysteinyl leukotrienes), 2218, 2805
$CysLT_1$ receptor antagonists. *See* Montelukast; Zafirlukast
